EDUCATION

Santa Clara University **Santa Clara, CA**

Bachelor of Science in Computer Science and Engineering, Minor in Mathematics *Expected June 2027*

- GPA: 3.8/4.0

Relevant Coursework

- Operating Systems, Computer Networks, Database Systems, Algorithms, Computer Architecture, Compilers

SKILLS

- **Languages:** TypeScript, Python, JavaScript, SQL, C, C++, Bash
- **Web & Data:** Node.js, React, Flask, PostgreSQL, REST API design, Pandas
- **Platform & DevOps:** AWS (EKS, EFS), Kubernetes, Helm, Terraform, Docker, Backstage, GitHub Actions, Datadog
- **AI & Security:** OpenAI API (vector stores, LLM classification), MCP, OIDC, Okta, GitHub Apps, RBAC

EXPERIENCE

Resmed **San Diego, CA**

Platform Engineering Intern (15 months; full-time summers, part-time school year) *June 2025 - August 2026*

- Owned an AI-spend governance product in Backstage (React, Node/TypeScript, SQL), cutting budget review from 2 days to 5 hours, routing $1.34M from 352 engineers through 187 approving managers; added MCP tools for agent approvals.
- Shipped self-service multi-namespace Kubernetes provisioning (RBAC, quotas, Helm retry/rollback), a year-old team request blocked by a one-namespace-per-team cap; now 143 namespaces across 13 EKS clusters, all team-provisioned.
- Designed a production LLM pipeline classifying ~1,000 Slack support messages weekly over OpenAI vector stores, giving the team its first view of recurring pain points via weekly metrics and monthly briefings to 17 senior managers.
- Automated identity lifecycle across GitHub Enterprise and OpenAI Platform via a plan/apply reconciler, cutting access provisioning from ~1.5 days to 1 PR review for 100+ projects and eliminating long-lived secrets via OIDC.
- Authored 232 pull requests across 48 repos, sole author of 80%+ of the code in 9; reviewed 135 PRs across 30 repos.

PROJECTS

MatchDay — Premier League Analytics Platform | Demo **March 2026**

- Built a full-stack Flask analytics platform (team of 4), merging three football APIs into player/team dashboards with percentile charts and per-90 normalized metrics, plus a budget-constrained Best XI optimizer.
- Engineered cross-source data reconciliation with Unicode-normalized key matching to unify player records across three feeds, plus fuzzy string matching to resolve inconsistent team names between sources.
- Constructed pytest suites across the pipeline, route, and auth layers with a coverage gate enforced in CI.

Disneyland Crowd and Wait Time Predictor | GitHub | Website **January 2026**

- Designed and deployed a full-stack wait-time predictor (Next.js, TypeScript, Python, Supabase/Prisma), training per-ride XGBoost models via walk-forward cross-validation across 23 engineered features.
- Shipped an accuracy page scoring every published prediction against the observed wait, holding the model publicly accountable to a live ~11-minute mean absolute error instead of a training-time number reported once.

LEADERSHIP & INVOLVEMENT

Santa Clara University **Santa Clara, CA**

Community Facilitator (Resident Assistant) *September 2025 - Present*

- Run 15+ community and academic events a year for a 44-resident floor, averaging 30 attendees.
- Mediate roommate conflicts at the peer level and route residents to counseling and campus safety.
