EDUCATION

Santa Clara University **Santa Clara, CA**

Bachelor of Science in Computer Science and Engineering, Minor in Mathematics *Expected June 2027*

- GPA: 3.8/4.0

Relevant Coursework

- Database Systems, Operating Systems, Algorithms, Software Engineering, Computer Networks, Computer Architecture, Machine Learning, Artificial Intelligence, Compilers, Cryptography

SKILLS

- **Languages:** TypeScript, Python, JavaScript, SQL, C, C++, Bash
- **Web & Data:** Node.js, React, Flask, PostgreSQL, Knex, REST API design, Pandas
- **Infrastructure & DevOps:** AWS (EKS, EFS, OIDC), Kubernetes, Helm, Terraform, Docker, GitHub Actions, Datadog
- **AI:** OpenAI API (vector stores, LLM classification), Model Context Protocol (MCP), AWS Bedrock

EXPERIENCE

Resmed **San Diego, CA**

Platform Engineering Intern *June 2025 - August 2026*

- Owned a full-stack AI-spend governance product (React, Node/TypeScript, SQL) with approval workflows, GitHub Billing API provisioning and scheduled reconciliation, routing $1.34M in requests from 352 engineers in four months.
- Replaced manual support triage with a production LLM pipeline classifying ~1,000 Slack messages weekly (50,000+ to date) over OpenAI vector stores, producing automated weekly metrics and monthly executive summaries.
- Replaced a monolithic provisioning workflow with composable TypeScript services — Helm retry/rollback, per-team RBAC, resource quotas — delivering self-service Kubernetes multi-tenancy across 143 namespaces and 13 EKS clusters.
- Automated identity lifecycle for a 3,295-member GitHub Enterprise and OpenAI Platform using a declarative plan/apply reconciler with OIDC secretless authentication and dry-run-first safety controls.
- Shipped a team-aware pull-request approval gate governing merges across repositories, implementing multi-team quorum, approval-revocation policy and bot/author exclusion — built solo from an empty repo in one week.
- Rebuilt the org-wide Slack announcement platform from shell scripts into typed TypeScript services with a versioned shared library, adding edit-in-place message updates and identity-resolved user tagging.

PROJECTS

Disneyland Crowd and Wait Time Predictor | GitHub Repo **November 2025**

- Built and deployed a full-stack wait-time predictor (Next.js, TypeScript, Python, Supabase/Prisma) with a GitHub Actions cron ingesting live queue data and XGBoost models forecasting per-ride waits.
- Shipped an accuracy page scoring every published prediction against the observed wait, exposing the model's live error rate rather than a single training-time number.
- Covered the stack with Jest, Playwright and pytest suites across the frontend, end-to-end flows and the ML service.

MatchDay — Premier League Analytics Platform | Demo **March 2026**

- Built a Flask analytics platform with a team of 4, merging FPL, Understat and API-Football data into comparison APIs with percentile charts and per-90 normalized metrics.
- Engineered cross-source player matching with Unicode normalization and fuzzy joins to unify three data feeds.
- Authored test suites across the pipeline, routes and auth modules, enforcing a 60% coverage gate in CI.

AWSxInrix Hackathon | GitHub Repo | DevPost **November 2024**

- Built a Chrome extension with a team of 4 routing natural-language queries through AWS Bedrock and Flask APIs to OLlama, cutting average task completion time by 15 seconds in user testing.

LEADERSHIP & INVOLVEMENT

Santa Clara University **Santa Clara, CA**

Resident Assistant/Peer Educator *September 2025 - Present*

- Built and supported a community of 60 students through programming, mentorship, and daily engagement
- Led study sessions and provided mentorship to improve student understanding and confidence
